                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AL Submitted (24-JUL-1998) E-mail enquiries: humquery@sanger.ac.uk
Clone requests: clonerequest@sanger.ac.uk
On Jun 16, 1998 this sequence version replaced gi:318366.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above. This sequence is the
entire insert of clone 248EI. This sequence has been finished
according to sequence map criteria as follows. An attempt is made
to resolve.all sequencing problems, such as compressions and
repeats, but not necessarily within known annotated human repeat
sequence elements (e.g. Alu). Where the sequence is ambiguous,
there is an annotation using the 'unsure' feature key.

This sequence was generated from part of bacterial clone contigs of
human chromosome 6, constructed by the Sanger Centre Chromosome 6
Mapping Group. Further information can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cancer Institute by the group of Pieter de Jong.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MAPPING INFORMATION:
The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR7, send mailto:egreen@nhgri.nih.gov, or see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                           A run of A's extends from base 112507 to 112528 of DJ0560014. The data through this region differs in the number of A's represented. The submitted sequence reflects the longest run of A's in any one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality > 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Submitted (18-MAR-1999) Department of Genetics, Washington University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, On Mar 19, 1999 this sequence version replaced gi:3980538.

Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage etc. Order of segments in not known; 800 n's separate segments. repeat\_region

.15202)

repeat\_region repeat\_region repeat\_region repeat\_region repeat\_region repeat\_region repeat\_region repeat\_region repeat\_region repeat\_region repeat\_region repeat\_region repeat\_region repeat\_region This clone was derived from human PAC library RPCI-3 prepared by Pieter de Jong and coworkers at Roswell Park Cancer Institute, using the method described by Ioannou et al. Nature Genetics 6:84-9 (1994). The library is from one male donor. For further details, see http://bacpac.med.buffalo.edu/ The clone is available This sequence was generated from part of bacterial clone contigs human chromosome X, constructed by David BentLey's chromosome X mapping group at the Sanger Centre, Wellcome Trust Genome Campus, Hinxton, UK. Further information can be found at http://www.sanger.ac.uk/HGP/ChrX chemistry; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions. NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is H\_DJ290B04. The actual start of this clone is at base position 1 of DJ404K21; actual end is at 173767 of DJ404K21. This clone is part of an unanchored island, This sequence was finished as follows unless otherwise noted: all regions were double stranded or sequenced with an alternate (NID: 9995449) This clone contains STS's sWXD757 (NID:g405440) and sWXD512 orientation is unknown. IMPORTANT: This sequence is unfinished and does not necessarily
represent the correct sequence. Work on the sequence is in progress
and the release of this data is based on the understanding that the
sequence may change as work continues. The sequence may be
contaminated with foreign sequence from E.coll, yeast, vector,
phage etc. Order of segments is not known; 800 n's separate
segments. Unfinished: dJ288M22 Contig_ID: 01539 acc- Length:

This isolate was taken from California AIDS patient in 1984. There is an in-frame stop at position 3212 of the envelope coding sequence; the nef cds is uncertain beyond position 4049. A in-frame stop codon, 'taa,' found at positions 4224-4226 in the nef cds..

                                                                                                                                                                                                                                                                                                                                                                                                    TTACAAATATTA 13
The authors point out that this sequence is unusual because it both macrophage-tropic and extremely cytopathic in lymphocytes: they contend that the virus is unusual in so far as it is the first well-characterized infectious molecularily cloned macrophage-tropic HIV-1 strain derived from peripheral blood.
                                                                                                                                                                                                                                                                                      Human immunodeficiency virus type 1 provpr, vpu, env, tat, rev and nef genes, from strain 89.6.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2 TTACAAATATTA 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            American isolate SF2 and the European virus HAN(across the genome). This is the first report of a virus from Africa that clusters with North American rather than Zairean viruses: OYI and SF2 differ by approximately 7% in envelope. The single C -> S substitution at residue 22 of the OYI tat protein renders it inactive, but may not account for the avirulence of the virus. The pattern of envelopes the mutation and nef start is not what is typically encountered. A possible mutation from a 'g' to an 'a' at position 5006 produced the triplet 'ata' instead of the usually conserved start codon for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               11
                                                                                                                                                                                                                                                                                                                                                                                                                                          Sibling sequences for OYI(397) are available (see 1989:I-A-181).

JRCSF and JRFL (see <HIVJRFL) were isolated from cerebral spinal fluid and brain tissue of the patient JR, who died with Kaposi's sarcoma and severe AIDS encephalopathy (Science 236, 819-822, 1987). Both clones are infectious, but JRFL productively infects macrophages while JRCSF does not. (Peripheral blood was not available from the patient).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        M38429 M38429 MINA from extracellular virus taken from cerebral spinal fluid (1986). Infectious clone.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3 TACAAATATTA 13
                                                                                                                                                                                                                                                                                                                                                                                                                             SIVAGMIYO appears to lack a vpR coding region. [1] suggests the this may account for SIVAGMIYO'S lack of pathogenicity. The ercods contains an in-frame stop codon at positions 8077-8079, sinto the in-frame stop codons found in the SIV macaque and HIV-2 ROD35 envelope coding regions, except that SIVAGMIYO'S stop coding found 96bp downstream from the 3' splice junction of tat an interv, which is the location of the stop codon in the other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Miki,K., Kitamura,T. and Hayami,M.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               end of gag, clusters closest to the HIV2/SIVsm group in the 3' gag and 5' pol regions, and clusters closest to the other SIVagm lineages in the 3' pol, env and nef regions [1]. This feature was demonstrated for two viral sabaeus strains, sab-1 and sab-D37 (sequenced only over the 5' end of the pol gene). Jin et al.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence was obtained as part of a study designed to determine the breadth of genetic variation of SIV infecting African green monkeys. With this aim in mind, Jin et al. PCR-amplified, cloned and sequenced the LTR and partial envelope region from 12 isolates (ver-1, ver-2, gri-2, gri-3, sab-1, sab-2, sab-3, sab-4, tan-1, tan40, and tan-49). These isolates were derived from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          conclude that an ancestor of the sabaeus virus was a recombinant with two breakpoints: one roughly at codon 310 of gag and the ot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Phylogenetic analysis suggests that each AGM species is infected with a distinct subtype of SIVagm. Interestingly, the sabaeus vith a distinct subtype of SIVagm. Interestingly the sabaeus vertex serious seems to be a mosaic of many viruses infecting different primate species [1]. Virus sab-1 forms a distinct lineage in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Virus sab-1 was derived from a wild female asymptomatic sabaeus African green monkey. She was caught in her natural habitat of Senegal and susequently exported to the United States. From the point of capture and throughout the study, she was housed in an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 different African green monkey species inhabiting various

This sequence was obtained as part of a study designed to determine the breadth of genetic variation of SIV infecting African green monkeys: With this aim in mind, Jin et al. PCR-amplified, cloned and sequenced the LTR and partial envelope region from 12 isolates (ver-1, ver-2, gri-2, gri-3, sab-1, sab-2, sab-3, sab-4, tan-1, tan40, and tan-49). These isolates were derived from different African green monkey species inhabiting various
Eukaryota; Animalia; Chordata; Vertebrata; Mammalia; Theria; Eutheria; Primates; Haplorhini; Catarrhini; Hominidae.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ORGANISM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TITLE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  258 tattaaagaa 267
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Local Similarity 100.0%; les 10; Conservative
RS Grez.M. Dietrich, D., Balfe, P., Von Briesen, H., Maniar, J.K., Mahambre, G., Delwart, E.L., Mullins, J.I. and Ruebsamen-Waigmann, H. Genetic analysis of human immunodeficiency virus type 1 and 2 (HLV-1 and HLV-2) mixed infections in India reveals a recent spread of HLV-1 and HLV-2) from a single ancestor for each of these viruses at J. Virol. 68, 2161-2168 (1994)

ARD This sequence was obtained as part of a study to determine the genetic breadth of HLV-2 variation in India. In this study, blood samples were obtained from four patients from Bombay. India (D166, D808, D868, and D1024) and from one patient from Goa, India (D1071); each of the five patients was serologically dually reactive. The mean genetic divergence of the set of four sequences from Bombay was 7.3%, while the sequence from Goa was from 7 to 10.5% different from each of the Bombay sequences. The entire set of Indian sequences, including both the Bombay and Goa sequences, diverged from eleven non-Indian HLV-2 sequences by 23%. Because of the similarity of the Indian sequences, Grez et al. suggest that similar HLV-2 strains
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9 TATTAAAGAA 18

These data kindly submitted in computer readable form by Kenji
Trie, Department of Molecular Biology, Faculty of Science, Nagoya
University, Chikusa-Ku, Nagoya 464-01, Japan. The MSS1 protein
University, Chikusa-Ku, Nagoya 464-01, Japan. The MSS1 protein, which
Is reported to be 42% similar to the human TBP-1 protein, which
binds the HIV tat protein in vitro. Endogenous MSS1 enhances
tat mediated transactivation, leading the authors of [1] to conclude
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human immunodeficiency virus type 2 from PCR-amplified DNA extracted from uncultured PBMCs derived from a patient from Bombay, India whose sera was dually reactive (HIV1/HIV2).

Human immunodeficiency virus type 2

Viridae; ss-RNA enveloped viruses; Positive strand RNA virus; Retroviridae; Lentivirinae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              that MSS1 has a "key role in activation of HIV genes regulated by tat."

All five of these sequences clustered with HIV-2 subtype A viruses. HIV-1 env sequences from Indian patients D766, D808, D868, and D1024 clustered with HIV-1 C viruses, and as a set showed a similar degree of interpatient genetic similarity as did their HIV-2 counterparts.

Disclosure; Page 13; 39pp; English.

The invention relates to a UDP-N-acetylmuramate:L-alanine ligase (MurC polypeptide) encoded by the S. aureus MurC gene. Host cells containing an expression system comprising the MurC gene can be used for the recombinant production of the polypeptide. Agonists or the MurC polypeptide are used to treat conditions requiring increased activity or expression of the polypeptide. Antagonists, inhibitory nucleic acid or competitive polypeptide are useful for inhibiting the polypeptide e.g. bacterial (especially S. aureus) infections. They are also useful against Helicobacter pylori infections and related cancers, ulcers and gastritis. The antibacterial agents are useful to treat in-dwelling devices for Synthetic. Staphylococcus New isolated MurC polypeptide from Staphylococcus aureus and nucleic acid - useful in diagnosis, treatment and prevention Burnham MKR, Wallis NG; WPI; 99-062655/06. CC finction, and represents a DNA Sequence of the invention.

CC function, and represents a DNA Sequence of the invention.

CC function, and represents a DNA Sequence of the invention.

CC (NCIMB 40771). Host cells containing the DNA sequences are used to CC produce polypeptides or fragments. The proteins are used in the treatment CC of disease, for inducing an immune response by administering them, to CC produce antibody and/or T-cell immune response. Antagonists of the CC conditions which may be treated include bacterial infections, especially crespiratory, cardiac, gastrointestinal, central nervous, eye, kidney, CC curinary tract, skin, bones and joints. The proteins can also be used to CC cidentify antimirrobial compounds which are broad spectrum antibiotics, especially useful in the treatment of H. pylori infection.
                                                                                                                                                                 Query Match

C'he invention relates to a UDP-Wacetylmuramate:L-alanine ligase (Murc polypeptide) encoded by the S. aureus Murc gene. Host cells containing an expression system comprising the Murc gene can be used for the recombinant production of the polypeptide. Appoints or the Murc polypeptide are used to treat conditions requiring increased activity or expression of the polypeptide. Antagonists, inhibitory nucleic acid or competitive polypeptide are useful for inhibiting the polypeptide e.g. competitive polypeptide are useful for inhibiting the polypeptide e.g. competitive polypeptide are useful for inhibiting the polypeptide e.g. competitive polypeptide are useful for inhibiting the polypeptide e.g. the acterial (especially S. aureus) infections. They are also useful against the liobacter pylori infections and related cancers, ulcers and gastritis. The antibacterial agents are useful to treat in-dwelling devices for infection prevention or generally as wound treatments to prevent adhesion of bacteria to matrix proteins. The Murc polypeptide is also useful for diagnosing or prognosing a (susceptibility to) disease, for rational articles, to dentify modulators or specific receptors; in rational articles, to dentify modulators or specific receptors; in rational

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Staphylococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               immunisation. The present sequence represents a partial nucleotide
sequence (MurC ORF) of the MurC gene.
Sequence 660 BP; 233 A; 83 C; 120 G; 224 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 26-JUN-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                          179
                                                                                                                                                                                                                                                                                                                                                                                                      Н
